

Description:

This tool will allow a developer to associate a binary pattern with a particular filename to be loaded using the DGH 1711 I/O module. See supporting document “DGHE1711 Recipe Manager” for more details on its use.

Ports:

Name	Type	Description
FileName	String	The name of the file to load.
Program Name	String	Name of the internal program name that is unloaded.
Binary Input (B07-B01)	String	Binary coding from MSB to LSB.
Tool Version	String	Current VPM version needed along with the current version of this tool.
Status	String	Status of the tool after the last time it was executed.
Managed Files	String List	A list of all the managed files with the bit patterns assigned to them.
